Flashcard App Using Python Tkinter

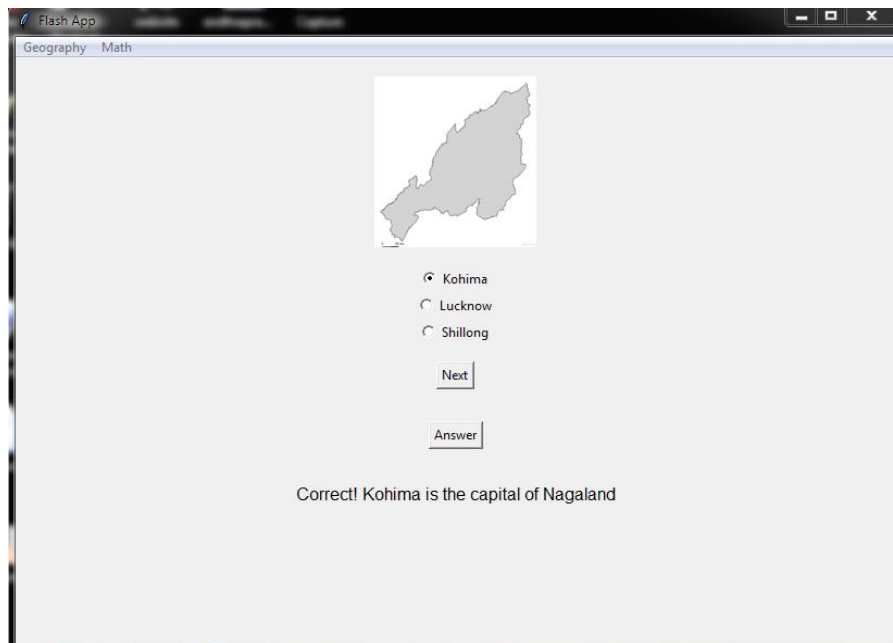

- Run the python code in python editor(VSCode preferably)
- Click on the "**Geography**" menu in the Menu bar and select the quiz you want to take (i.e. states/states capitals):

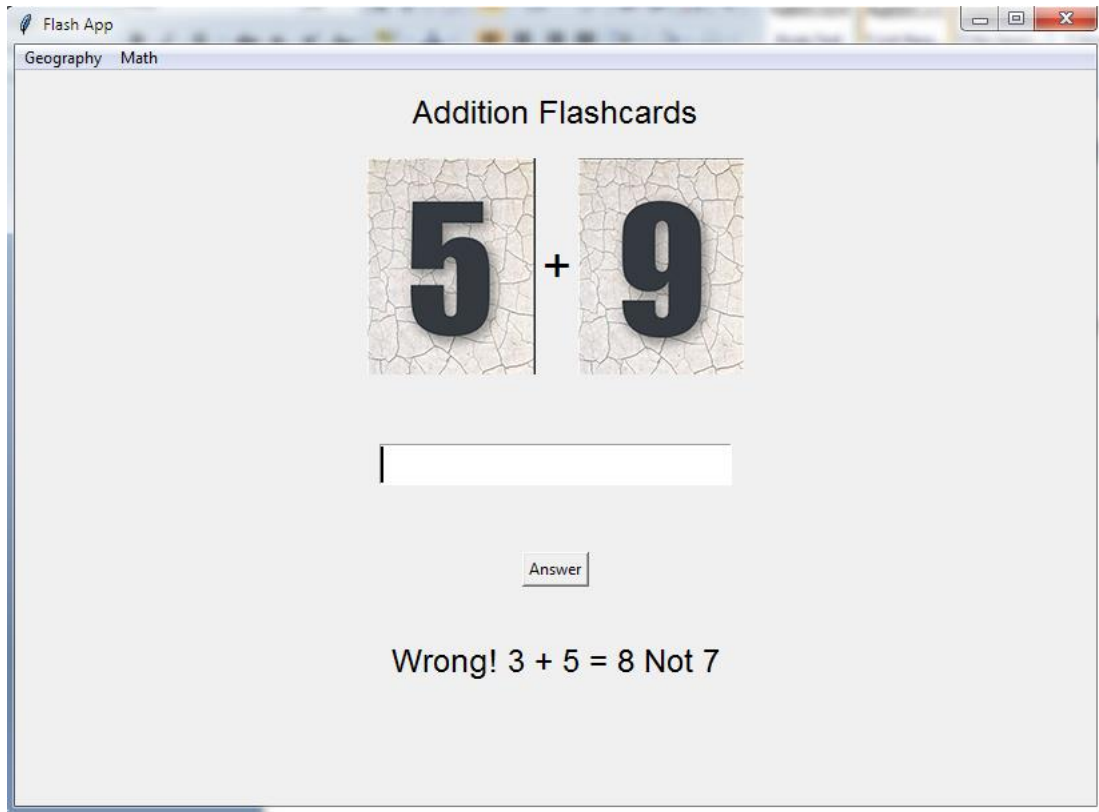

- Type the answer in entry box (eg. Maharashtra) and click on answer button. Depending on the answer given status will be displayed (Correct/Incorrect) along with the correct state name. The question will change as soon as the answer button is clicked.

- If you want to go to the next state without answering the current state then click on “**Next State**” button
- If you want to change the quiz goto step 1 and now select “**state capitals**” submenu
- Here the user has to choose 1 correct option out of 3 of the capitals of states and click on “answer” button to verify the result. The status of the answer will be displayed along with correct state and its capital city.

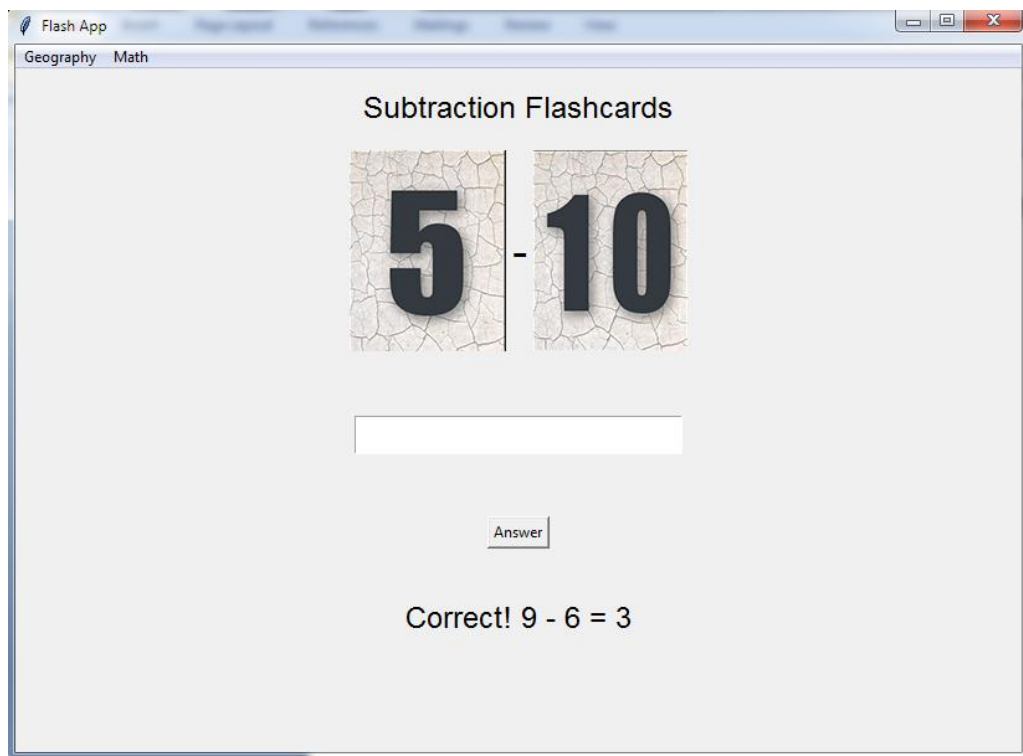

- Click on the “Next” button to change the question.
- If the user want to switch to another quiz then goto step 1 and select “**Math**” menu and click on “**addition**” submenu
- Type the answer in the Entry box provided.

- After logging the answer, the status of the answer will be displayed. The question will change as soon as the answer button is clicked.
- If the user want to give a try at subtraction quiz then goto step 1 and select “**Math**” menu and click on “**subtraction**” submenu

- Type the answer in the Entry box provided.

- After logging the answer, the status of the answer will be displayed. The question will change as soon as the answer button is clicked.
- If the user has attempted all the sections or want to leave the app, goto menu bar and click on "**Math/Geography**" menu and click on "**Exit**"
